Industrial Inspections

YOUR KEY TO CONTROL

“Independent third party inspection services in order to deliver control over industrial equipment”

How?

- **Key information** of equipment and inspection results
- **Knowledge** on global legislative requirements
- **Proactive planning**
- **Efficient inspections**

Industrial Inspections

YOUR KEY TO CONTROL

Examples of our services

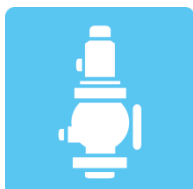

General examination

Warehouse inspections

Lifting & hoisting equipment

Pressure safety valves

Gauge Calibration

Non-destructive testing

Pre-shipment inspections

Special offshore surveys

Three “*pop-up*” organizations, with own vision

a) SAI platform

b) Standards Map

c) The Blue Numbers

Having added value to each other

Building capacity on sustainable agriculture - based on research and development activities undertaken by SAI Platform itself, its members and other relevant stakeholder groups.

Examples of such work include:

Developing **principles and practices for the sustainable production** of arable and vegetable crops, coffee, dairy and fruit.

Testing these best practices through pilot projects in Africa, America, Asia and Europe.

Benchmarking these principles and practices against the guidelines and recommendations from all major schemes and initiatives.

Compiling practical tools for farmers to successfully implement sustainable practices.

Developing a Sustainability Performance Assessment tool, for self-assessment or external assessment of sustainable agricultural practices.

Having added value to each other

STANDARDS MAP
YOUR ROADMAP TO SUSTAINABLE TRADE

The main objective of the program is to strengthen the capacity of producers, exporters, policymakers and buyers, to participate in more sustainable production and trade.

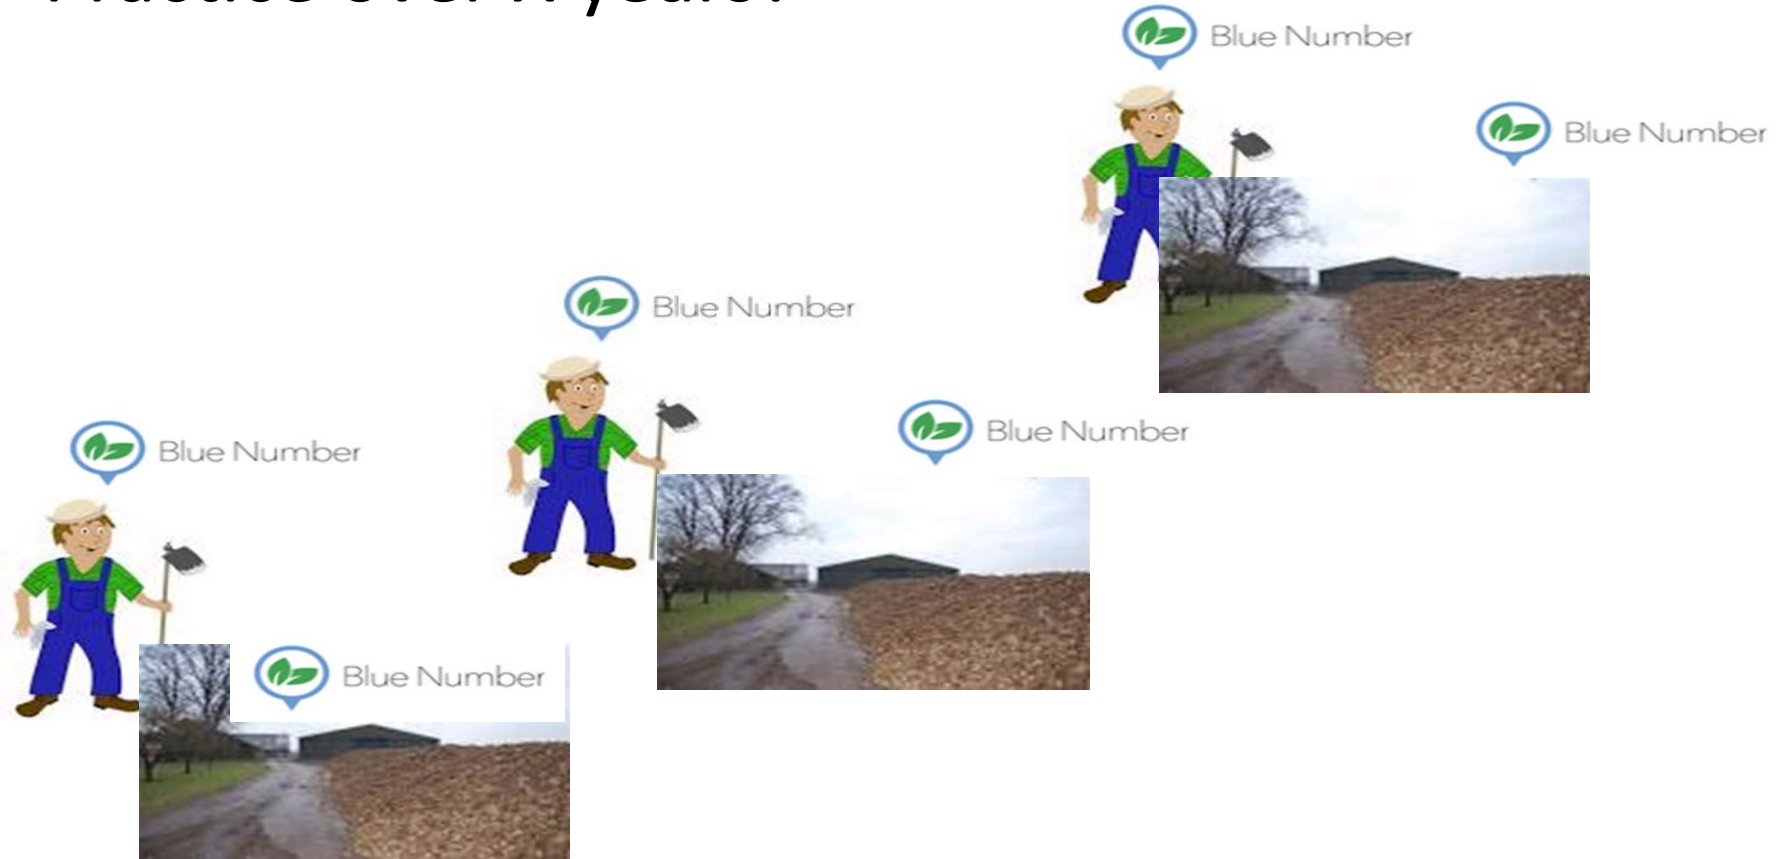

Standards Map is **an online platforms** which enables its users to explore and compare over **210 sustainability standards**, and build their personalized business' roadmap towards sustainable trade. Users, which include producers, manufacturers, brands, retailers, researchers and policymakers can: identify standards or codes of conduct which apply to their own business; review the main features of the selected standards and codes; generate comparisons of standards' content requirements; self-assess their business against standard requirements, generate their personalized sustainability diagnostic report which traces out a roadmap towards sustainable trade; save and share their sustainability diagnostic report with actors along the value chain via the Sustainability Marketplace.

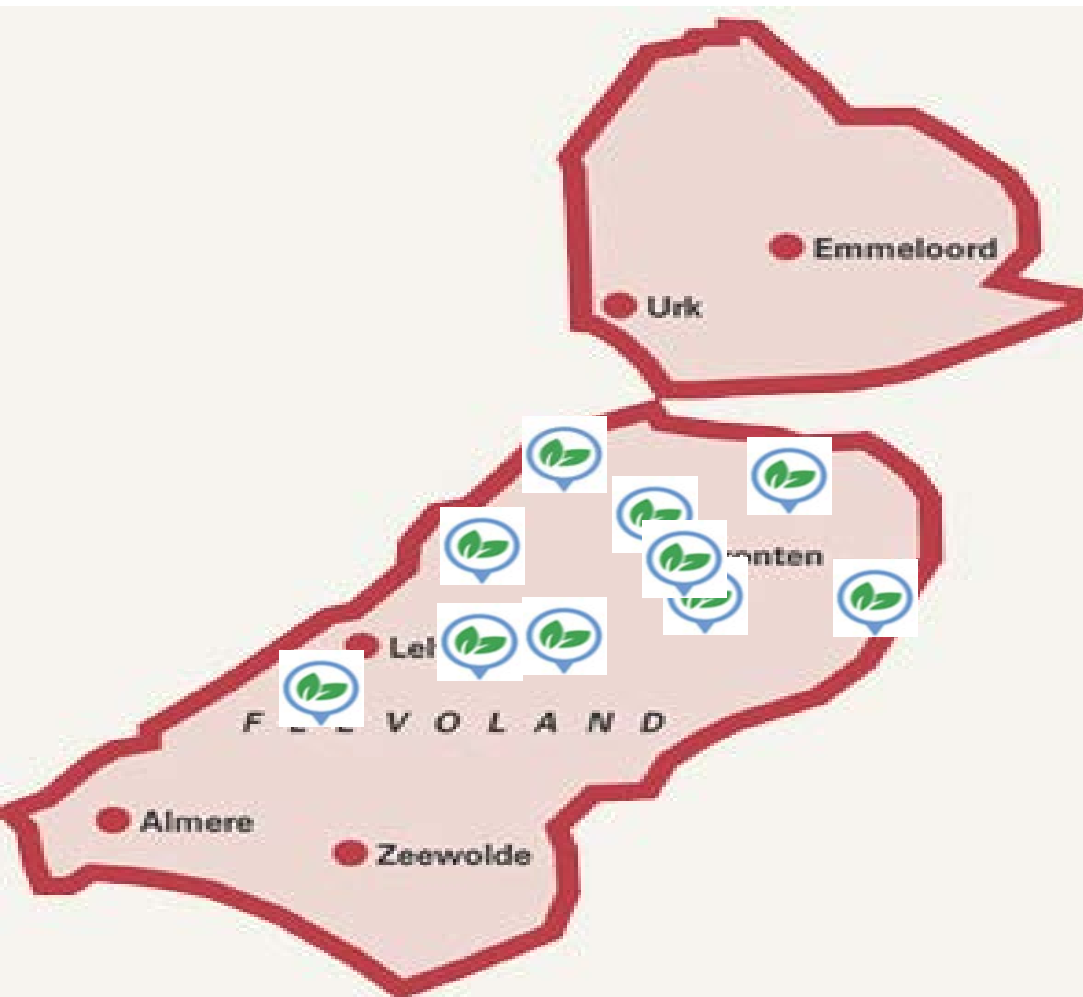

Having added value to each other

A bluenumber is a **unique identifier for a geo-located person**, place or thing. A bluenumber can be allocated to small economic actors to recognise and include them individually and collectively in a system. For example, **a small farmer** or a garment worker registered with a bluenumber is immediately identified as someone making a necessary contribution in a supply chain for better economic, social and environmental outcomes.

Palm Oil: Global brands profiting from child and forced labour

30 NOV
2016

The world's most popular food and household companies are selling food, cosmetics and other everyday staples containing palm oil tainted by shocking human rights abuses in Indonesia, with children as young as eight working in hazardous conditions, said Amnesty International in a new report published today.
